

Five of our divisions have an odd number of teams. This page explains why some teams play a few games against the neighboring division, and how those matchups were chosen.

Why crossovers exist

In a division with an odd number of teams, one team has no opponent every week. Over a full season that adds two to three extra weeks before everyone reaches 18 games. When two neighboring divisions each have an idle team in the same week, those two teams can play each other instead. One crossover game removes a bye from both divisions.

Varsity Silver Upper · 9 teams · 4 games

Idle team

One crossover game: both teams play, neither division has a bye

Idle team

The 2026-27 calendar

The season runs from late September into early March, and several weekends and holiday breaks are not available for league games. With those dates out, there are only so many open weeks. Every bye week an odd-sized division adds pushes its season closer to that limit, and crossovers keep it inside.

Unavailable for league games

How matchups were chosen

18 games for every team

9 home and 9 away.

Crossover games count toward each team's 18.

Neighboring divisions only

Gold with Silver Upper, Red with White, White with Blue Upper. No game ever skips a division.

Closest competitive fit

Crossover games lean toward the lower seeds of the higher division and the higher seeds of the division below. The weakest teams below never face the strongest teams above.

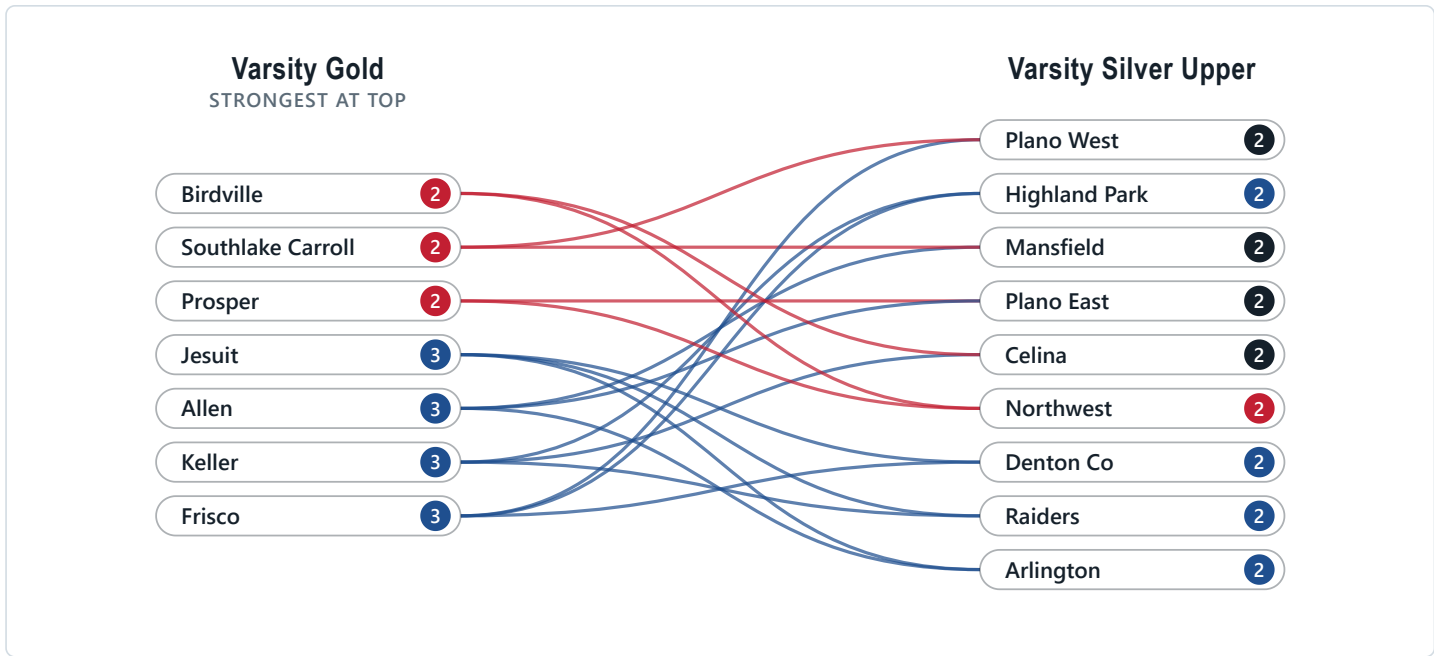

Shared fairly

Only enough crossovers to remove the byes, spread as evenly as possible across teams. No crossover pairing meets more than once.

Varsity: Gold and Silver Upper

18 crossover games **18** weeks **0** byes in either division

With one crossover every week, the idle Gold team and the idle Silver Upper team always play each other. The load is shared as evenly as the numbers allow: every Silver Upper team plays exactly two crossovers, and every Gold team plays two or three, with the third game going to Gold's four lower seeds. The bottom three Silver Upper teams only face the bottom of Gold.

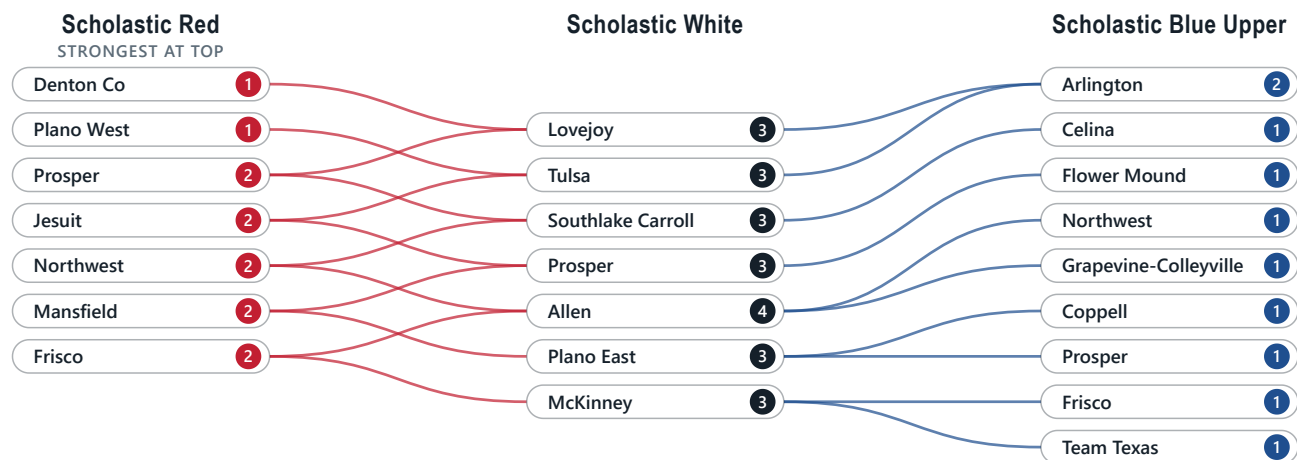

vs Gold top three (2 games each) vs Gold bottom four (3 games each)

Every Silver Upper team plays 2 crossovers. Dark badges mark Silver Upper teams that face both parts of Gold. Columns are staggered to show where the two divisions overlap in strength. Badges show each team's crossover count.

Scholastic: Red, White and Blue Upper

22 crossover games **23** of 23 teams play at least one **0** games skip a division

Three odd-sized divisions stack on top of each other, so White is the bridge between Red and Blue Upper, which never meet. Every team in all three divisions plays at least one crossover, and the load is spread as evenly as the numbers allow. Red teams play one or two, with the extra game going to the lower seeds. Every White team plays both ways, one or two games against Red and one or two against Blue Upper, for three crossovers each (Allen plays four). White's higher seeds lean toward Red and its lower seeds toward Blue Upper. Blue Upper teams play one each, and the top seed plays two.

Red vs White (12 games)

White vs Blue Upper (10 games)

Dark badges mark White teams, which all play both Red and Blue Upper. Tulsa's three crossover games fall on its every-other-weekend trips, alongside its regular White games.

Varsity Silver Lower (6 teams), Varsity Bronze (12) and Scholastic Blue Lower (8) have no crossover games. Out-of-town teams in those divisions play two games every other weekend within their own division.
